Professional Summary

QA Automation Engineer with hands-on experience in manual and automated testing across E-Commerce, B2B, Banking, Healthcare and Energy domains. Skilled in designing and maintaining hybrid automation frameworks with Selenium WebDriver, Java, Appium, Playwright with TypeScript, TestNG, Maven and the Page Object Model; functional, regression, smoke, sanity, integration, end-to-end, cross-browser and accessibility testing; API testing with Postman and Bruno; and CI/CD with Jenkins and GitHub Actions.

Technical Skills

Automation Testing: Selenium WebDriver, Appium, Playwright, TestNG, Maven, Page Object Model (POM), Hybrid Automation Framework Design and Maintenance, Automated Test Script Development

Testing Types: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, Integration Testing, End-to-End Testing, Cross-Browser Compatibility Testing, Accessibility Testing, API Testing, Mobile Application Testing (Native, Hybrid, Web-Based; APK, iOS)

Tools, Programming and Database: Postman, Bruno, JIRA, Jenkins, Git, GitHub, GitHub Actions, MS Excel, GitHub Copilot, Java, TypeScript, SQL, MySQL, XPath, CSS Selectors, Flutter

Process and Methodologies: Test Plan and Test Case Design, Test Case Review, Test Scenarios, Test Execution, Test Reporting, Test Summary Reports, Requirement Analysis, Defect Logging and Reporting, SDLC, STLC, Agile, Scrum, CI/CD

Professional Experience

QA Automation Engineer Jun 2022 – Present

DigiExcel Services, New Friends Colony, New Delhi, India

- Design, develop and maintain automated test scripts using Selenium WebDriver and Appium for web and mobile apps.
- Develop and enhance a hybrid automation framework using Maven, TestNG and the Page Object Model, with XPath and CSS selectors for dynamic objects.
- Create detailed, comprehensive and well-structured test plans and test cases.
- Perform functional, integration and regression testing to ensure software quality across releases.
- Execute automated tests, analyze results and report findings to relevant teams.
- Collaborate with development teams to create and implement testing strategies.

QA Engineer Aug 2019 – Jun 2022

i3Infosoft Pvt Ltd, India (Remote)

- Designed, developed and executed comprehensive test plans to ensure software quality.
- Collaborated with development teams to identify, report, and troubleshoot software defects.
- Maintained and updated test cases for new software features, and performed manual testing to validate user interface and user experience quality.
- Participated in Agile/Scrum ceremonies and contributed to sprint planning with QA perspective.

Projects

BitsProof – Proof of ID Platform (Current) *Playwright, TypeScript, Postman, Bruno, GitHub Actions*

- Automate end-to-end regression for the customer portal and admin console with Playwright and TypeScript across Chromium, Firefox and WebKit, gated in GitHub Actions on every pull request.
- Cover sign-in, MFA setup with TOTP and role-based permissions for admin, owner, manager and basic users, plus WebSocket approval notifications and document-share requests.
- Design and execute mobile test plans for the Flutter app on Android and iOS: ID capture with OCR extraction, document expiry, one-time QR codes, OTP rate limiting, session invalidation and back-button navigation.
- Validate REST APIs with Postman and Bruno across roles – authentication, MFA-gated sessions, device tracking and audit logs – checking status codes and payloads against database state.
- Report defects per GitHub issue with repro-video evidence and acceptance-criteria traceability, and maintain the Flutter regression and end-to-end suites.

TP-Link (B2B) – Loyalty Platform *Java, Selenium, TestNG, Maven, Postman, MySQL, JIRA*

- Test partner registration and onboarding end to end: dependent state and city dropdowns, PAN, GSTIN and pincode validation and terms-and-conditions gating.
- Validate the scheme, rebate and claim lifecycle: participation, multi-step claim submission, approvals, rewards history, rebate targets and bulk sales uploads.
- Verify role-based access for partners, sales persons, RSMs and admins with MFA setup, audit logs and push, WhatsApp and email notifications on the mobile-first PWA.
- Validate REST API requests with Postman, verify sales-trend, product-performance, city-wise and vertical-wise report accuracy, and automate regression cases with Java, Selenium and TestNG.

Pharmacy Website *Java, Selenium, TestNG, Maven, Postman, MySQL, JIRA, MS Excel*

- Perform functional, regression, smoke, sanity, integration, compatibility and accessibility testing.
- Design and develop automation scripts using Java, Selenium and TestNG, with XPath and CSS expressions for identifying dynamic objects.

Ring Master – Claims Audit and Filing Tool *Java, Selenium, TestNG, Postman, MySQL, JIRA*

- Test the claims auditing workflow end to end: audit queue and claim selection, the audit form with its mandatory fields and validation rules, and submission of the completed audit details.
- Validate the audit form behaviour and data handling: field-level validation messages, required-field enforcement, and the audit record and filing status produced by each submission.
- Verify role-based access for auditor and admin users, and confirm submitted reimbursements and audit details are reflected correctly in claim records and reports.
- Design and review test cases, test scenarios and test summary reports, log defects with proper root cause by analyzing application logs, and track them to closure in JIRA.
- Execute functional, cross-browser and API testing with Postman, and design and maintain the automation suite using Java, Selenium and TestNG.

Education

Bachelor of Computer Applications, Computer Science – Indira Gandhi National Open University

Certifications

Advanced Java — Advanced Excel with MIS Reporting and Dashboard
